Use Case Example

Use Case Story:

User wants to login to site

Assumption:

User has existing account

Steps:

- 1. User loads front page
- 2. User enters their information in the username and password field
- 3. User hits submit
- 4. User is redirected to existing profile page

Variable Interactions:

- user needs to create their account > Provide signup
- user's account doesn't verify > Try again
- user tries to many times > lock them out
- forgot username/password > reset link
