

## **Events Page User Story:**

User wants to see the music events that are occurring at BigMusicClubConclomerate's three following music venues: Big Hall, Smokey Club, Little Café. There are a fairly large number of events, and some people might only be interested in the Smokey Club, seeing events at Little Café, or only love the bigger event atmosphere, Therefore, not all events should not be listed right when the page loads. Instead, they should be collapsed and only show when the user selects the venue.

At the top of the page, should be an event highlight area, which list the next event(s) to occur, based on today's date. It should catch the eye and draw people in.

### **Assumption:**

User will enter the events page from a link from home page, the website's banner, or from an external reference.

### **Steps:**

1. User loads events page
2. User selects a venue [panel/tab/etc.]
3. The events that are specific to that event then load into that
4. When a user rolls over an event, they should see more event details and a link to the performer's website

### **Variable Interactions:**

- if there are no upcoming events the [panel/tab/etc.] should say this
- if a user rolls over an event and there are not more details, then it should not display the box
